## Why Choose the Burlington Denture Clinic

Welcome to the award winning Burlington Denture Clinic!

For nearly 15 years, Peter Iapichino DD, owner of the Burlington Denture Clinic has had the pleasure of serving the Burlington and surrounding community. People come to the Burlington Denture Clinic to receive denture care second to none! At the Burlington Denture Clinic we greet you with a warm, welcoming smile and walk you through every step of your denture needs.

We fabricate and design all aspects of dentures including implant dentures, permanent teeth in a day, complete dentures, partial dentures, digital dentures, immediate dentures, denture relines & repairs, and soft liners. We strive to meet your needs and offer house calls for those who are unable to make it into our clinic.

At the Burlington Denture Clinic your needs are our goal. We deliver the upmost care so you are comfortable and beyond happy with the fit and look of your teeth. Visit us today, for a smile that will change your life!

## The Importance of Relining your Denture

A denture reline is a simple procedure to reshape the underside of a denture, so that it fits more comfortably on your gums. Relining is periodically necessary as dentures lose their grip in the mouth due to bone loss or gum shrinkage. At the Burlington Denture Clinic, we recommend having your dentures relined every 2-3 years. Relining a denture will affect its fit and feel, it will not change the appearance or bite.

A denture reline is a one day process that is completed in our state of the art laboratory on site.

## Replacing Dentures

Replacing your dentures is usually recommended every 5-7 years. When you have dentures, you should want them to work effectively and look natural in your mouth. We want you to look and feel attractive and able.

When inquiring about a new set of dentures, we can determine if your current denture materials have deteriorated at all or if you can use your dentures for more years to come. Sometimes, a patient's jaw may have shifted due to bone loss, so new dentures will need to be created and customized in order for them to fit properly again. Well-fitting dentures work best and look both attractive and natural.

If you are experiencing impaired chewing abilities, unattractive wear of your dentures, discomfort, or your dentures continue to fall out of place, speak with us to determine if it is time to replace your dentures.

The Burlington Denture Clinic would like to wish a Happy Fall Birthday to our caring and amazing Office Manager, Shannon and our wonderfully skilled Denture Technician Susan!

Wishing all of our patients and their families a Fall Season filled with gratitude, thanksgiving, reflection and love. As always, thank you for putting your trust in us! ~ **Peter Iapichino DD**
